

HOW PIPELINE-LEVEL DIFFERENCES IMPACT EXOPLANET ATMOSPHERIC CHARACTERISATION

Simon Schleich

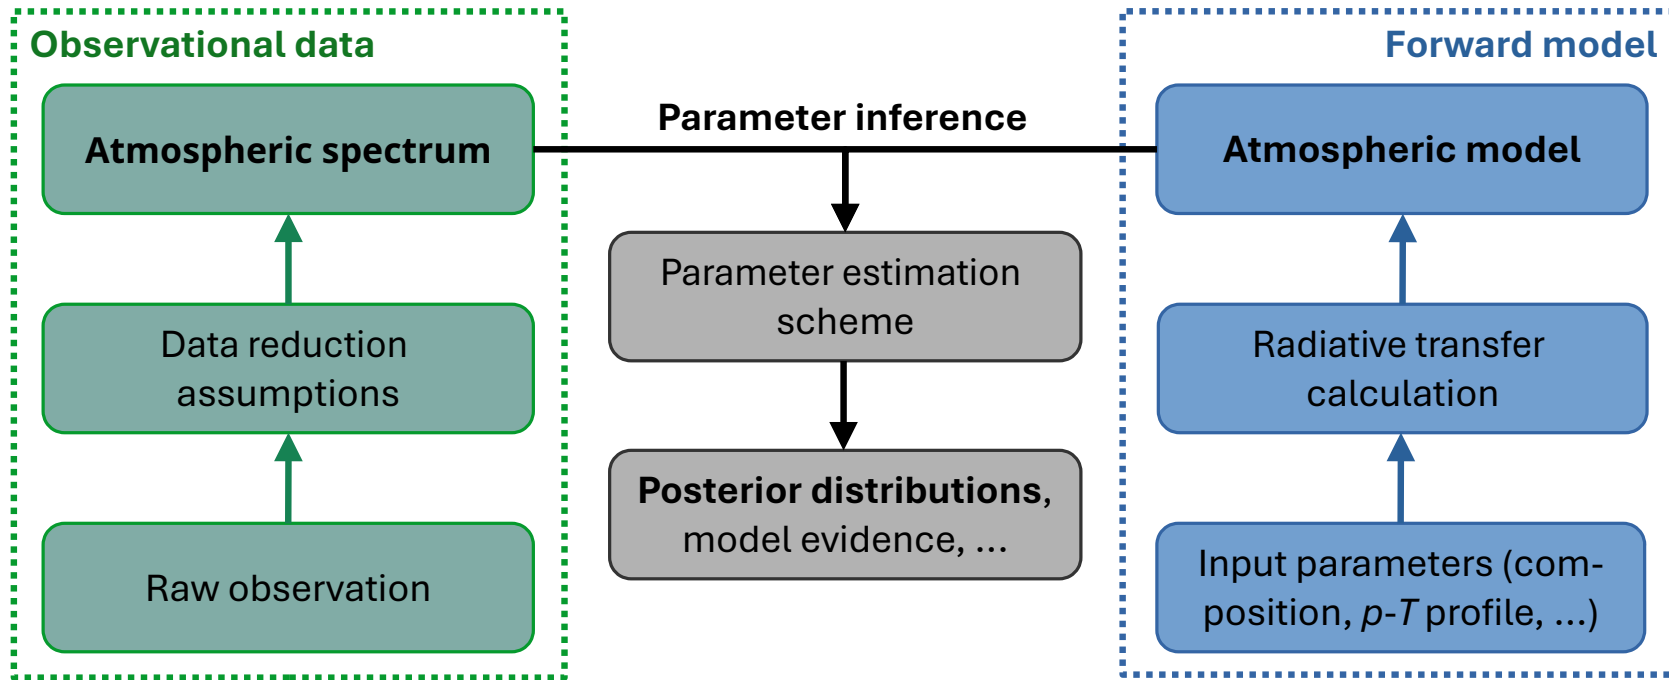

Department of Astrophysics, FGGA
University of Vienna

In collaboration with:

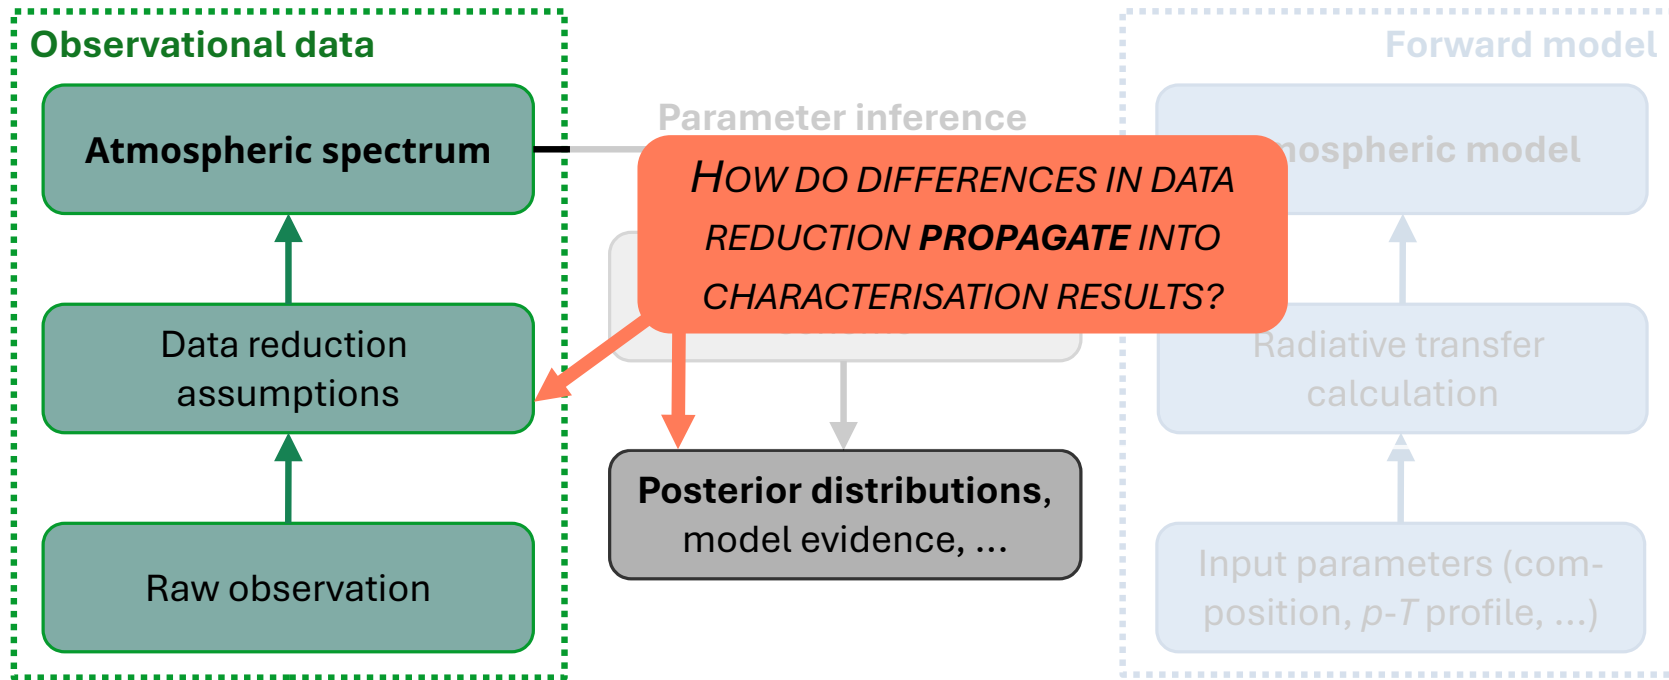

Sudeshna Boro Saikia, Quentin Changeat, Manuel Güdel, Aiko Voigt, Ingo Waldmann

Poster #11

- Characterising atmospheres through **spectral inversion**

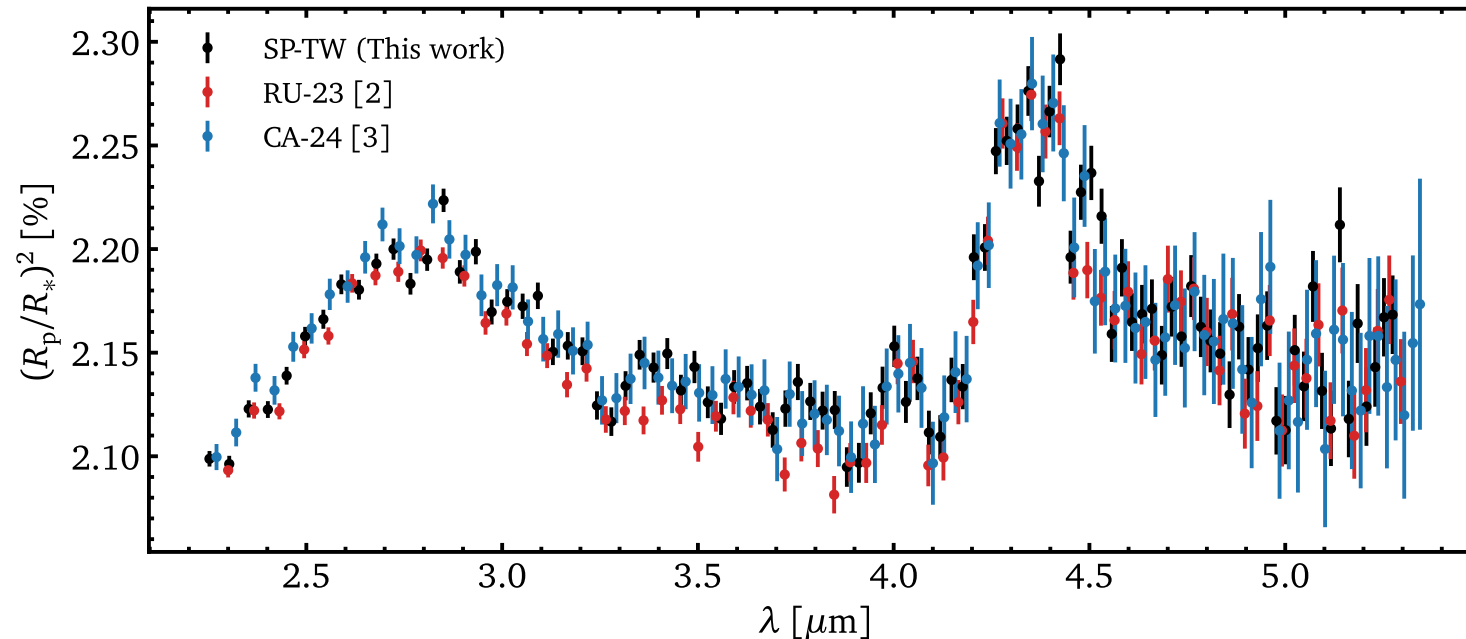

- Characterising atmospheres through **spectral inversion**

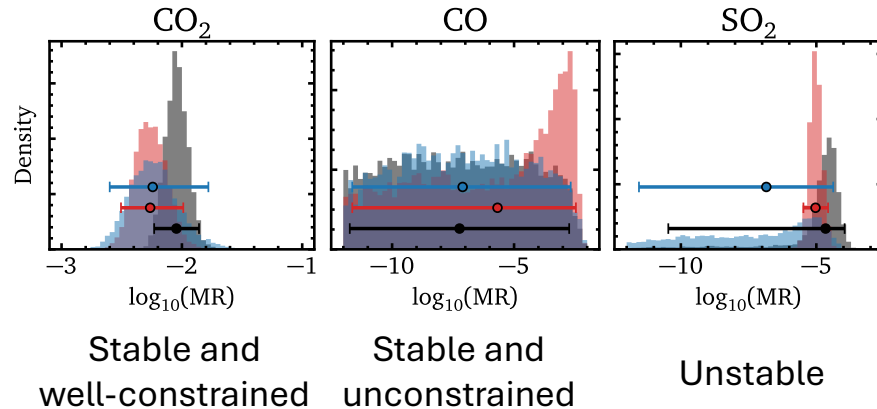

DATA SET

- Single NIRSPEC PRISM transit of the hot Jupiter WASP-39 b
- Independent reductions of the same data using the **same pipeline**

- 3 types of retrieval posteriors

If you are interested in more details
